                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to novel human GENSET coding sequences (ACC51060-ACC51115) and proteins (ABR48453-ABR48508). The GENSET sequences are useful for preparing a composition for treating GENSET-related disorders. They can also be used as markers for tissues in which the corresponding protein is preferentially expressed, as molecular weight markers on Southern gels, as chromosome markers or tags to identify chromosomes, and as reagents in assays to quantitatively determined levels of GENSET expression in biological samples
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New GENSET polynucleotides and polypeptides, useful for preparing composition for treating GENSET-related disorders and as reagents assays to quantitatively determined levels of GENSET expression in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    25-MAY-2001; 2001US-0293574P.

                                                                      The invention relates to a novel method for detecting soft tissue sarcoma which comprises obtaining a first soft tissue sample from an individual and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression of the gene in both soft tissue samples and comparing the presence of soft tissue sarcoma. The method of the invention has cytostatic applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic acid sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma-upregulated protein of the invention. The current sequence is not shown within the specification per se but was submitted in CD format by the inventor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Aziz
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Early detection of soft tissue sarcoma comprises determining expression of a gene in a first soft tissue sample and a normal soft tissue sample and comparing the gene expression, also useful in treating soft tissue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          soft tissue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human soft tissue sarcoma-upregulated protein - SEQ ID
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ADQ21405;

The present invention also discloses the method of using the polypeptide in treating various diseases, such as cancer. The present invention also discloses the agonist resisting the polypeptide and its treatment effect. The present invention also discloses the application of the polynucleotides encoding the human protein with cancer suppressing function. The present sequence represents the amino acid sequence of a human cancer suppressing protein.

                                                                                                                                                                                                           This sequence represents a unnatural collagen-like polymer of the invention. The products may be used as films, fibres, moulded objects and admixed with other natural or synthetic polymers or coatings on fibres, films, labware or other surfaces, e.g. prosthetic devices. The polymers may be used for binding a wide variety of specific binding materials, as catalytic substances (where the amino acid sequence may specifically chelate a wide variety of elements), as purification media, composites, laminates or adhesives. They may also be combined with inorganic or organic materials such as carbon fibres, nylon fibres, nitrocellulose, etc., as flask coatings or in synthetic matrices for the growth and study of cells, as affinity columns or as supports for biological materials. The polymers have collagen-like properties, but may be easily expressed in micro-organisms in high efficiency. The new sequences can be tailored

                                                                                                                                                                                                                                                                       Novel DNA sequence encodes a polymer comprising segments of repeating units of 3-9 amino acids from natural collagen, i.e. the present sequence collagen like protein (CLP), able to assemble into aligned structures formable into articles. The polymer comprises at least 2 segments joined by an unaligned intervening oligopeptide, other than the repeating unit. The polymer can be used to make fibres, films, membranes, emulsions, coatings, etc., useful as, e.g. specific binding materials, catalysts, purificen, agents, composites, laminates, adhesives, cell growth surfaces, affinity columns and supports for biological materials. Typical applications include wound dressings, and in vivo protheses. The polymer produces articles with good mechanical properties, and the intervening oligopeptide can provide a ligand for binding a mol., antibody, etc., or a chemically reactive site for coupling to proteins, etc. (Updated on 25 and ARR-2003 to correct PF field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Polymer; repeat unit; natural collagen; intervening oligopeptide; fibre; film; membrane; emulsion; costing; collagen like protein; specific binding material; catalyst; purification agent; composite; laminate; adhesive; cell growth surface; affinity column; biological material support; wound dressing; in vivo prothesis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                        This invention relates to DNA encoding a proteinaceous polymer. The polymer comprises strands of repeating units of a natural protein capable of an intervening oligopeptide structures, with at least 2 strands joined by contervening oligopeptide is unaligned and the polymer has individual contervening oligopeptide is unaligned and the polymer has individual contervening oligopeptide is unaligned and the polymer has individual contended by molecular weight polymers of amino acids based on produce and chemically active structural polymers. These polymers can be used to provide a variety of structural polymers. These polymers can be used to provide a variety of structural polymers. These polymers can to produce articles including coatings, or other (non)structural components, e.g. fibres, films, membranes, adhesives or emulsions, or components, e.g. fibres, films, membranes, adhesives or emulsions, or components, e.g. fibres, films, membranes, adhesives or laminates. Peptide sequences AABS391_B6391_represent monomer sequences which can be used in the polymers of the invention. Oligonuclectide sequences can be used in the construction of SLP and FCB-SLP polymers. Oligonuclectide sequences AAF23387 - AAF23397 and amino acid sequences AAB64003 - can be used in the construction of CLP (collagen like protein) collymers. Oligonuclectide sequences AAB64003 - AAF23397 - AAF23397 and amino acid sequences AAB64003 - CC AAB64008 are used in the construction of Keratin collymers. Proteins and peptides represented by sequences AAB64015 - AAB64014 are examples of polymers of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   09-NOV-1988;

                                                                                                                                                                                                                                               The present invention provides compositions containing proteinaceous polymers comprising proteins with strands of repeating units of a natural protein. These can be used as coatings, fibres, films, membranes, addesives, emulsions, in composites and laminates, and in affinity columns, diagnostic devices and sensors. The present sequence is a protein sequence used as a demonstration of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New recombinant proteinaceous polymers comprising strands of repeating units of natural protein which can be assembled into aligned structures, useful for producing e.g. fibers, films, membranes, adhesives, or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     07-JUN-1995;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           06-FEB-2001

                                                          comprises at least 2 segments joined by an unaligned intervening oligopeptide, other than the repeating unit. The polymer can be used to make fibres, films, membranes, emulsions, coatings, etc., useful as, e.g. specific binding materials, catalysts, purificn. agents, composites, laminates, adhesives, cell growth surfaces, affinity columns and supports for biological materials. Typical applications include wound dressings, and in vivo protheses. The polymer produces articles with good mechanical properties, and the intervening oligopeptide can provide a ligand for binding a mol., antibody, etc., or a chemically reactive site for coupling to proteins, etc. (Updated on 25-MAR-2003 to correct PF field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Polymer; repeat unit; natural collagen; intervening oligopeptide; fibre; film; membrane; emulsion; coating; collagen like protein; specific binding material; catalyst; purification agent; composite; laminate; adhesive; cell growth surface; affinity column; biological material support; wound dressing; in vivo prothesis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              04-NOV-1986;
29-OCT-1987;
09-NOV-1988;
                                                                                                                                                                               films, labware or other surfaces, e.g. prosthetic devices. The polymers may be used for binding a wide variety of specific binding materials, as catalytic substances (where the amino acid sequence may specifically chelate a wide variety of elements), as purification media, composites, laminates or adhesives. They may also be combined with inorganic or organic materials such as carbon fibres, nylon fibres, nitrocellulose,
                          etc., as flask coatings or in synthetic matrices for the growth and study of cells, as affinity columns or as supports for biological materials. The polymers have collagen-like properties, but may be easily expressed in micro-organisms in high efficiency. The new sequences can be tailored to give the desired properties
                                                                                                                                                                                                                                                                                                                                                  This sequence represents a unnatural collagen-like polymer of the invention. The products may be used as films, fibres, moulded objects and admixed with other natural or synthetic polymers or coatings on fibres, admixed with other natural or synthetic polymers or coatings on fibres,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Collagen-like polymer; synthetic polymer; fibre prosthetic device; catalytic substance.

This invention relates to DNA encoding a proteinaceous polymer. The polymer comprises strands of repeating units of a natural protein capable of assembling into aligned structures, with at least 2 strands joined by an intervening oligopeptide other than the repeating units. The intervening oligopeptide is unaligned and the polymer has individual strands of the same or different repeating units. The DNA is useful for producing high molecular weight polymers of amino acids based on biologically and chemically active structural polymers. These polymers and to produce a variety of structures for different purposes, and to produce articles including coatings, or other (non)structural components, e.g. fibres, films, membranes, adhesives or emulsions, or with other compounds and/or compositions to form composites or laminates.
                                                                                                                                                                                                                                       New DNA encoding a polymer with strands of protein joined by intervening oligopeptide weight polymers of amino acids.

                                                                                                                                                                                                                                            04-NOV-1986;
29-OCT-1987;
09-NOV-1988;
06-NOV-1990;
New recombinant proteinaceous polymers comprising strands of repeating units of natural protein which can be assembled into aligned structures, useful for producing e.g. fibers, films, membranes, adhesives, or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Protein polymer; repetitive sequence; repeat; mechanical property; coating; fibre; film; membrane; adhesive; emulsion; composite; laminate;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Peptide sequences AAB63971-B63991 represent monomer sequences which can be used in the polymers of the invention. Oligonuclectide sequences AAF23370 - AAF23386 and amino acid sequences AAB63992 - AAB64002 are used in the construction of SLP and FCB-SLP polymers. Oligonucleotide sequences AAF23387 - AAF23397 and amino acid sequences AAB64003 - AAB64008 are used in the construction of CLP (collagen like protein) polymers. Oligonucleotide sequences AAF23399 - AAF23409 and amino acid sequences AAB64009 - AAB64014 are used in the construction of keratin polymers. Proteins and peptides represented by sequences AAB64015 - AAB64049 are examples of polymers of the invention
                                                                                                                                                                                                                                                                                                                                                                07-JUN-1995;
                                                                                                                                                                                                                                                                                                                                                                                                                                                              US6184348-B1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Unidentified
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       diagnosis; sensor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Repetitive protein

          The present invention relates to a human collagen-like protein (I; ADF94310) from Escherichia coll. The protein is useful for after processing in surgical sutures, artificial skins, collagen-film coating layers as well as artificial organ coating layers, and in paints with superior surface adhesion obtained by binding with silver halide, dyes etc. The protein has a repeat-helical structure which is different from
                                                                                                                   Claim 1;
                                                                                                                                             Human collagen-like protein produced by culturing transformant bacteria, for use in surgical sutures, artificial skins, collagen-film coating layers as well as artificial-organ coating layers, and in paints.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention provides compositions containing proteinaceous polymers comprising proteins with strands of repeating units of a natural protein. These can be used as coatings, fibres, films, membranes, adhesives, emulsions, in composites and laminates, and in affinity columns, diagnostic devices and sensors. The present sequence is a protein sequence used as a demonstration of the invention
                                                                                                                                                                                                        WPI; 2003-314347/06.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ş
The invention relates to a novel isolated breast specific nucleic acid collecule. The polypeptides of the invention have cytostatic activity. The convel nucleic acids and polypeptides may have a use in gene therapy, and cas vaccines. The breast specific nucleic acid and polypeptide are useful for diagnosing and monitoring the presence and metastases of lung cancer in a patient. The full for determining the presence of a breast specific collypeptide is useful for determining the presence of a breast specific collypeptide is useful for determining the presence of a breast specific collypeptide. In a sample, as well as for treating a patient with breast cancer coll expressing the breast specific cancer cell expressing the breast specific nucleic acid molecule or collypeptide. In particular, these breast specific genes and proteins are conseculated for identifying, diagnosing, monitoring, staging, imaging and creating breast cancer and non-cancerous disease states in breast tissue. These are also useful in gene therapy, production of transgenic animals cand cells, and in the production of engineered breast tissue for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
This invention describes a novel pharmaceutical composition for treating cor preventing arthritis or other degenerative disease which comprises a CC polypeptide a collagen type IX alpha I chain NC4 domain or a biologically CC active fragment having antiarthritic, antiinflammatory and communication with a carrier. The invention CC describes two methods for recovering a polypeptide having anti-arthritic cor anti-inflammatory activity. The first method comprises isolating a CC mixture comprising a GAG-peptide and a polypeptide having anti-arthritic cor esparating the GAG-peptide from the polypeptide having a molecular CC separating the GAG-peptide from the polypeptide, and recovering the polypeptide. The second method comprises incubating connective tissue in CC comprises medium that provides a buffered pH range of 2.5-8.5 for a CC time and under conditions sufficient to release a GAG-peptide and a CC polypeptide having a molecular weight of less than 30000 Da, recovering the polypeptide from the GAG-peptide, and recovering the polypeptide having a molecular weight of less than 30000 Da. The CC recovered anti-arthritic or anti-inflammatory polypeptides are useful for inducing cartilage formation or for preparing a medicament for the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches

                    The present invention describes a human lung specific nucleic acid molecule. Also described: (1) a method for determining the presence of a lung specific nucleic acid (LSNA) in a sample; (2) a vector comprising the nucleic acid molecule; (3) a host cell comprising the vector; (4) a method for producing a polypeptide encoded by the nucleic acid molecule; (5) a polypeptide encoded by the nucleic acid molecule; (6) an antibody or its fragment that specifically binds to the polypeptide; (7) a method for determining the presence of a lung specific protein in a sample; (8) a method for diagnosing and monitoring the presence and metastases of lung cancer in a patient; (9) a kit for detecting a risk of cancer or
                                                                                                                                                                                                                                                                                                                                                                                         New human lung specific nucleic for diagnosing or treating lung
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WPI; 2004-053457/05
                                                                                                                                                                                                                                                                                                                                  Claim 11; SEQ ID NO 64; 221pp; English.

Human LSNA molecules and related proteins have cycostatic activity, and can be used in gene therapy. They are useful for preparing a composition for diagnosing or treating lung cancer. The present sequence represents a human lung specific protein, which is used in the exemplification of the present invention.
